EXPERIMENT 02
Account setup and platform exploration

Aim

Set up an authorized Zoho Creator workspace and identify the components used to build the Student Admission Enquiry Management System application.

Procedure

1. Sign in to your institution-approved Zoho account, verify email, enable multi-factor authentication if allowed, and note the data center. Do not record passwords or tokens.
2. Record plan or trial, user count, record limit, API allowance, and whether environments are available.
3. Create the app 'Student Admission Enquiry Management System' (short name SAE). Record the app link name, locale and time zone.
4. Explore edit mode and live mode. Identify forms, reports, pages, workflows, users, connections and logs.
5. Create a temporary Sandbox_Check form with one text field, submit one synthetic record in live mode, view it in a report, then delete the form after checking dependencies.
6. Draw: Browser/Mobile -> Creator UI -> Permissions and Workflows -> Creator Data, with an optional outbound connection.

Implementation and verification

Component	What to identify	In this application
Form builder	Field type, display name, link name, required and unique settings.	Student enquiry, course and follow-up forms
Workflow editor	On Validate, On Success, schedules, custom functions.	Default Status 'New'; validation; admission update (Exp. 6)
Reports and pages	Source form, filters, record detail, dashboard elements.	All Student Enquiries, All Courses, Follow Up Report, Statuses, Modes, Dashboard
Administration	Users, permissions, connections, logs, environments.	Roles in Exp. 8; CRM connection in Exp. 7

Evidence and testing

E02: redacted app overview, architecture sketch, plan checklist, one temporary test record before cleanup. Confirm a logged-out user cannot open private data.

Plan checklist item	Recorded value
Plan / trial	Trial - banner shows 'Trial expires in 15 days' (screenshots of 25-Oct-2026)
Application name	Student Admission Enquiry Management System (SAE)
Data center, user count, record limit, API allowance, environments	Record from Settings / Subscription page: _____
Sandbox_Check test record created and deleted	Yes / No: _____ (date: _____)
Logged-out access test	Private link opened in a signed-out browser: login required - Yes / No: _____

Application images and explanation

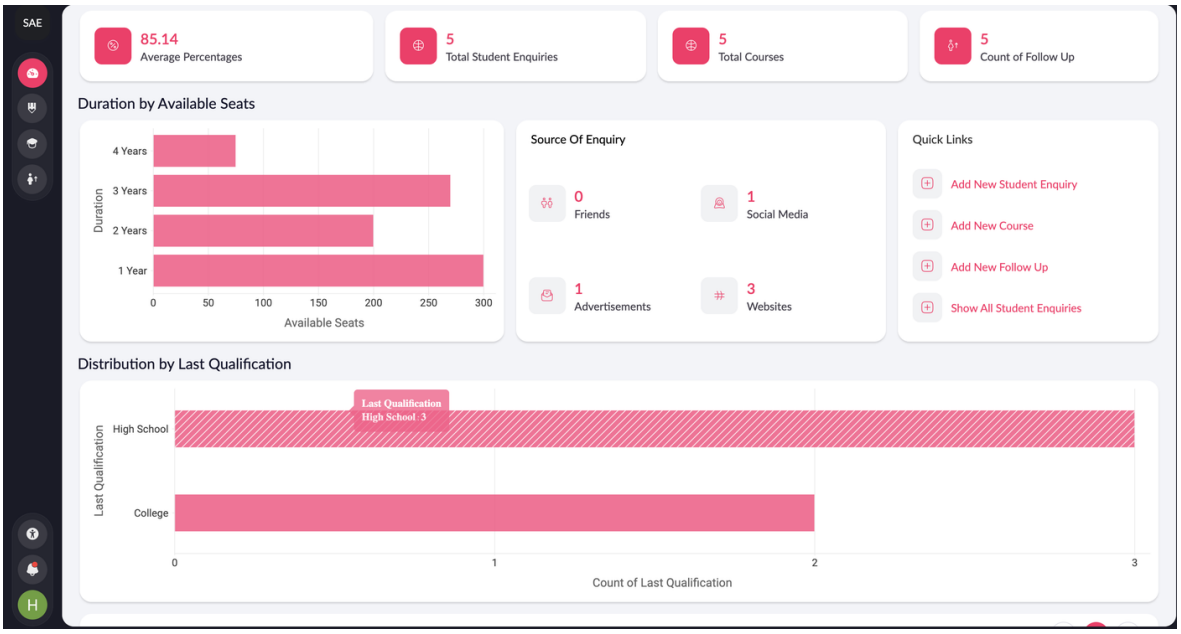

Figure 1: Application dashboard - KPI tiles, Duration by Available Seats, Source of Enquiry, Quick Links, Distribution by Last Qualification

The left navigation holds four sections: Dashboard, Student Enquiries, Courses and Follow Up. The dashboard shows average percentage (85.14), total student enquiries (5), total courses (5) and follow-up count (5), with charts built from the stored records.

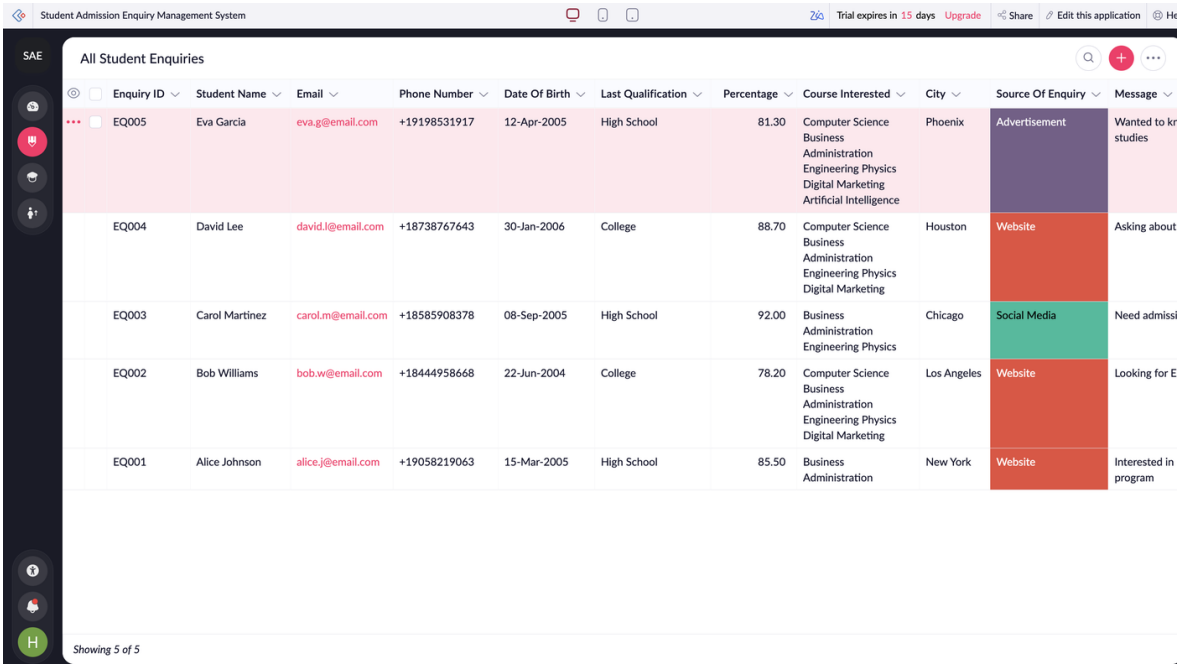

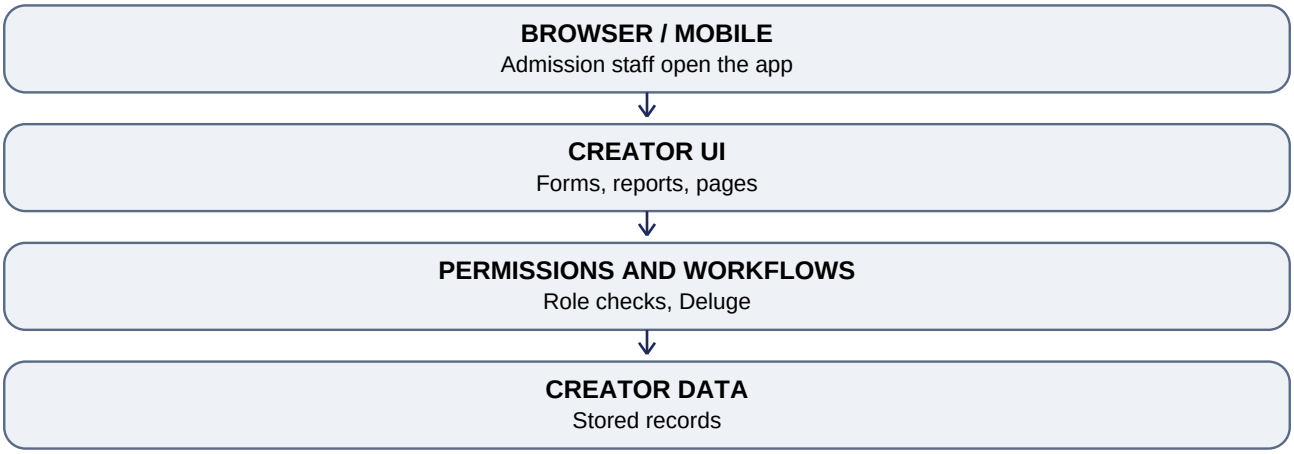

Figure 2: All Student Enquiries report - source records with colour-coded Source of Enquiry

The report lists Enquiry ID, student name, email, phone, date of birth, last qualification, percentage, course(s) interested, city, source and message. Five synthetic records (EQ001 to EQ005) are stored.

Process diagram

Generated explanatory diagram. It is not a screenshot of an executed workflow.

Result

Expected result and verification criteria. Account and private app are ready, a synthetic record can be saved and retrieved, and each component's role is explained. Plan-dependent features are recorded as found.
