EXPERIMENT 03
Survey of emerging low code trends

Aim

Prepare a source-based survey of emerging low code practices and judge their relevance to the student admission enquiry application.

Procedure

1. Define questions: which tasks are AI-assisted, how are integrations governed, what stays a developer's job?
2. Collect at least five official sources (Creator, Deluge, CRM API, Catalyst docs). Record title, URL, access date and licensing notes.
3. Classify evidence: AI-assisted development, conversational interfaces, API integration, governed citizen development, embedded analytics, hybrid low code plus pro code.
4. For each trend separate a documented feature from your interpretation. Do not turn feature lists into adoption statistics.
5. Optional: a small voluntary questionnaire; record sample size and method. If none, label it a desk survey.

Implementation and verification

Trend	Admission-office use	Evaluation question
AI assistance	Draft validation scripts and follow-up remarks.	Does a human review catch wrong logic?
API composition	Sync new enquiries to CRM as leads; send admission updates.	Do retries avoid duplicate messages?
Governed development	Separate app builders from counsellors and faculty.	Who approves releases?
Built-in analytics	Source-of-enquiry, qualification and seat charts.	Do totals match source records?
Hybrid architecture	Specialized validation (e.g. Enquiry ID format) via Catalyst.	Is the extra service worth its cost?

Source log (desk survey; no questionnaire was conducted):

#	Title	URL	Accessed	Licensing note
1	Zoho Creator Help	https://www.zoho.com/creator/help/	25-Oct-2026	Vendor documentation; summarised in own words
2	Deluge Scripting Language Help	https://www.zoho.com/deluge/help/	25-Oct-2026	Vendor documentation; summarised
3	Zoho CRM API v8 Documentation	https://www.zoho.com/crm/developer/docs/api/v8/	25-Oct-2026	Vendor documentation; summarised
4	Zoho Catalyst Documentation	https://docs.catalyst.zoho.com/en/	25-Oct-2026	Vendor documentation; summarised
5	Zoho Creator REST API Documentation	https://www.zoho.com/creator/help/api/v2.1/	25-Oct-2026	Vendor documentation; summarised

Documented feature versus interpretation

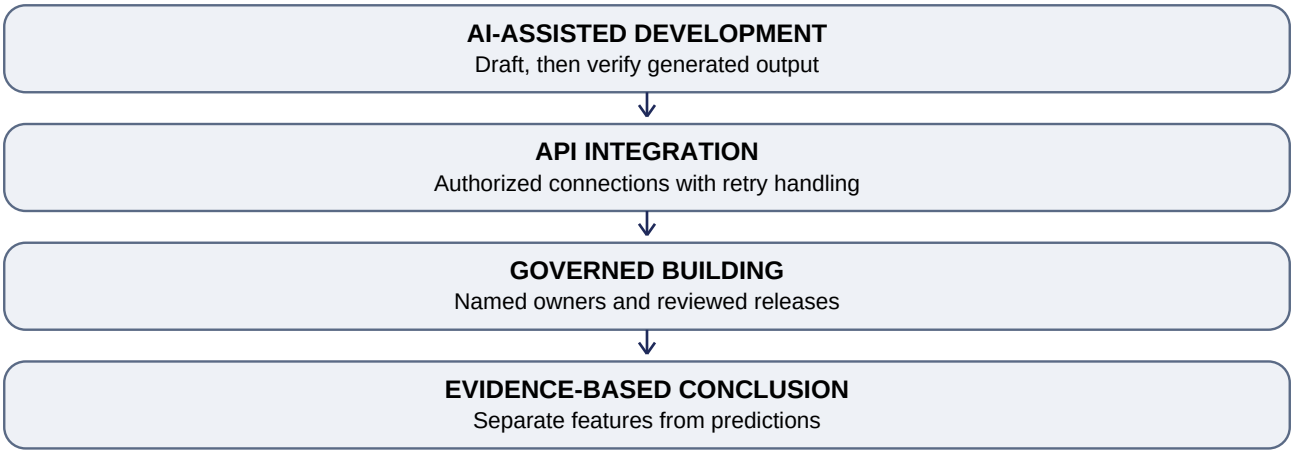
Trend	Documented feature (source)	Interpretation for this project
AI assistance	Creator offers AI assistance whose availability depends on plan and region (1). Availability must be confirmed with the administrator.	May speed up first drafts of validation scripts; output still needs review and tests (Exp. 9).
API composition	Deluge can call REST endpoints with invokeurl and send mail (2); CRM v8 provides an upsert operation (3).	Enquiries can be pushed to CRM as leads without duplicates (Exp. 7).

Trend	Documented feature (source)	Interpretation for this project
Governed development	Creator supports users, roles, permission sets and environments (1).	Counsellors use the app; only authorised builders edit it (Exp. 8, 11).
Built-in analytics	Creator reports and dashboards support charts and filters (1).	Dashboard totals can be reconciled with source reports (Exp. 5).
Hybrid low code + pro code	Catalyst provides serverless functions that Creator can call (4, 5).	Useful for rules too complex for Deluge (Exp. 14).

Evidence and testing

E03: bibliography, source extraction table, finished discussion with limitations. Limitation: this is a desk survey of vendor documentation only; it gives no adoption statistics, and vendor documents are not independent evidence of effectiveness.

Process diagram



Generated explanatory diagram. It is not a screenshot of an executed workflow.

Result

Expected result and verification criteria. At least five trends are explained with traceable sources; documented capabilities, predictions and any survey data are clearly separated.
