EXPERIMENT 06
Deluge workflows, testing and debugging

Aim

Implement enquiry validation, status rules and an admission-update notification, and test success and failure paths.

Procedure

1. Create a workflow on Student_Enquiry: On Validate (create). Use your exact link names (adjust the sample below).
2. Keep validation free of email and API calls. Send notifications only after a successful save or from the button action.
3. Restrict direct editing of Enquiry_ID after creation; enforce this server-side.
4. Create the Send_AdmissionUpdate_Button function: select only records with Status 'Admitted' and a missing Admission_Notified_On date, send one email each, set Admission_Notified_On after success.
5. Create a Follow_Up On Validate rule: Next Follow Up Date must be after Follow Up Date.
6. Check execution logs; use temporary info statements with record IDs only, then remove them.

```
// Student_Enquiry: On Validate - create (illustrative - match your link names)
if(input.Percentage < 0 || input.Percentage > 100)
{
    alert "Percentage must be between 0 and 100.";
    cancel submit;
}
if(input.Date_Of_Birth != null && input.Date_Of_Birth >= zoho.currentdate)
{
    alert "Date of birth must be in the past.";
    cancel submit;
}
if(Student_Enquiry[Email == input.Email].count() > 0)
{
    alert "An enquiry with this email already exists.";
    cancel submit;
}
input.Status = "New";

// Follow_Up: On Validate
if(input.Next_Follow_Up_Date != null && input.Next_Follow_Up_Date <= input.Follow_Up_Date)
{
    alert "Next follow-up date must be after the follow-up date.";
    cancel submit;
}

// Send_AdmissionUpdate_Button (custom function, illustrative)
pending = Student_Enquiry[Status == "Admitted" && Admission_Notified_On == null];
for each rec in pending
{
    sendmail
    [
        from: zoho.adminuserid
        to: rec.Email
        subject: "Admission update"
        message: "Your admission status has been updated. Please contact the admission office."
    ]
    rec.Admission_Notified_On = zoho.currentdate;
}
```

Concurrent submissions can both pass the duplicate-email check; a unique rule on the field or serialized processing is needed for production. The same applies to any future seat-decrement logic on Course.Available_Seats.

Implementation and verification

Test	Condition	Expected
T01	Valid new enquiry	Saved with Status New
T02	Missing Email	Rejected
T03	Duplicate Email	Rejected
T04	Percentage 105	Rejected
T05	Date of birth in the future	Rejected
T06	Next Follow Up Date before Follow Up Date	Rejected
T07	Admission button clicked twice	No duplicate email
T08	Enquiry not Admitted	No notification
T09	Board drag by unauthorized user	Denied
T10	Import/API path	Same validation applies

Evidence and testing

E06: script, compile screenshot, test log with actual outcomes, execution-log excerpt. Report actual results only.
Test log (enter after running):

Test	Actual outcome	Pass / Fail
T01	_____	____
T02	_____	____
T03	_____	____
T04	_____	____
T05	_____	____
T06	_____	____
T07	_____	____
T08	_____	____
T09	_____	____
T10	_____	____

Application images and explanation

Process diagram

Generated explanatory diagram. It is not a screenshot of an executed workflow.

Result

Expected result and verification criteria. Validation, status rules and notifications pass their tests with captured evidence. Any race condition or bypass blocks production until fixed.
