EXPERIMENT 11
Development to production deployment

Aim

Prepare and verify a controlled release of the admission enquiry application through the environments your account supports.

Procedure

1. Confirm whether Development, Stage and Production environments exist. If not (for example on a trial plan), document a design-only release using separate test and live apps.
2. Prepare release 1.0: change list (forms Student_Enquiry, Course, Follow_Up; reports; Admission_Dashboard_Page; workflows; CRM connection; roles), dependencies, tests, owner, recovery plan; freeze edits.
3. Publish to stage; review dependencies and warnings; configure stage connections and email routing.
4. Run T01 to T10, access tests and integration tests in stage; record approval.
5. Back up production, then publish; verify connections, schedules, permissions; run a limited smoke test.
6. Monitor logs and failed queues; keep a recovery plan. Publishing definitions and migrating data are separate.

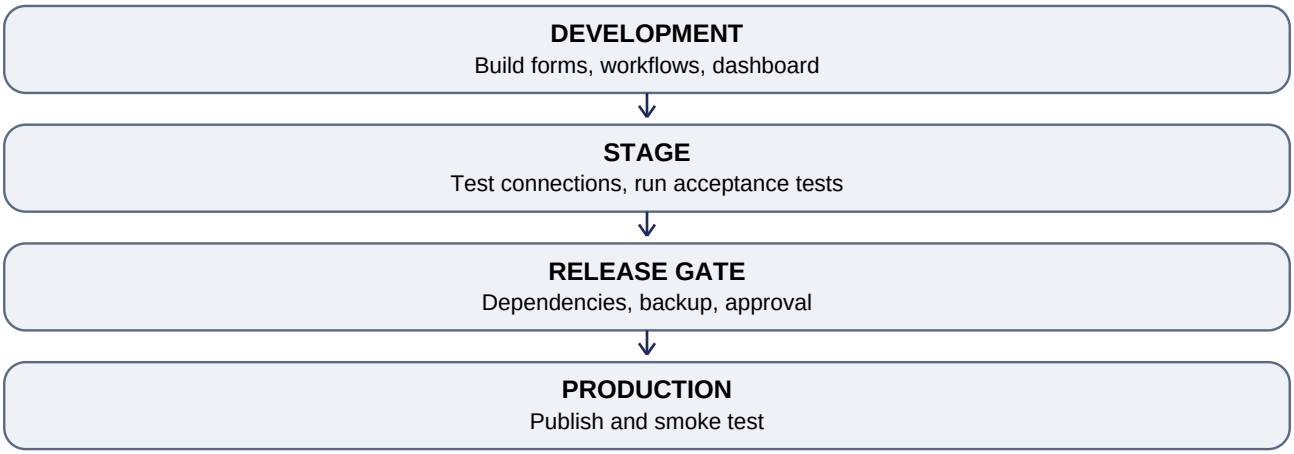
Implementation and verification

Release gate	Acceptance evidence	Status
Functional	Create enquiry, move status, notify tests pass	Pending
Security	Role tests pass; no public sensitive report	Pending
Integration	Correct CRM org; failures visible	Pending
Data	Backup verified; counts reconcile (5 enquiries, 5 courses, 5 follow-ups in test data)	Pending
Operations	Owner and recovery steps documented	Pending

Evidence and testing

E11: release notes, stage test log, approval record, backup reference, smoke test. The application runs on a trial plan (banner: 'Trial expires in 15 days'). Environment availability on this plan: _____. If production is not authorized, mark publishing 'Not run'. Publishing status: _____.

Process diagram



Generated explanatory diagram. It is not a screenshot of an executed workflow.

Result

Expected result and verification criteria. Release accepted only when gates pass; otherwise the blocked gate is recorded and no production deployment is claimed.
