EXPERIMENT 12
Security, governance and administration

Aim

Establish safeguards for applicant data, privileged actions, changes and recovery.

Procedure

1. Inventory data: public course information, restricted applicant contact and academic data, restricted uploaded documents (marksheets, ID proofs), secret credentials. Collect only needed fields.
2. Apply least privilege; review public links, exports, mobile access; remove unused users and connections.
3. Keep secrets in connections; never in fields, scripts, logs or screenshots; revoke a test credential and confirm it fails.
4. Inspect platform audit for a create, edit and export action; note retention.
5. Draft a retention policy for approval (do not call it a legal requirement); run a backup and restore drill in an isolated location.
6. Document change control, quarterly access reviews and incident steps: contain, preserve logs, notify owner, investigate.

Implementation and verification

Data class	Examples in this app	Handling
Public	Course Name, Duration, Available Seats	May be shown on admission pages
Restricted	Student Name, Email, Phone, Date Of Birth, City, Last Qualification, Percentage, Message	Named accounts only; export limited to Admission Manager
Restricted files	Marksheets, ID proofs (if uploaded)	Not on public links; viewer access by role
Secret	Connection credentials and tokens	Stored only in connections; never in fields or logs

Control	Owner	Verification
Permissions review	App administrator	Role matrix checked (Exp. 8)
Change approval	Application owner	Release notes retained
Backup and restore	Administrator	Counts and lookups reconcile
Connection lifecycle	Integration owner	Scopes and revocation tested
Data minimization	Admission manager	Unneeded fields removed

Draft retention proposal (for approval, not a legal requirement): keep active enquiries until the admission cycle closes; review Not Interested and Rejected records after a period set by the institution; delete or anonymize on approved schedule. Period decided by: _____.

Evidence and testing

E12: data inventory, control register, sanitized audit entries, restore results, incident exercise notes. Actual audit entries and restore results: _____.

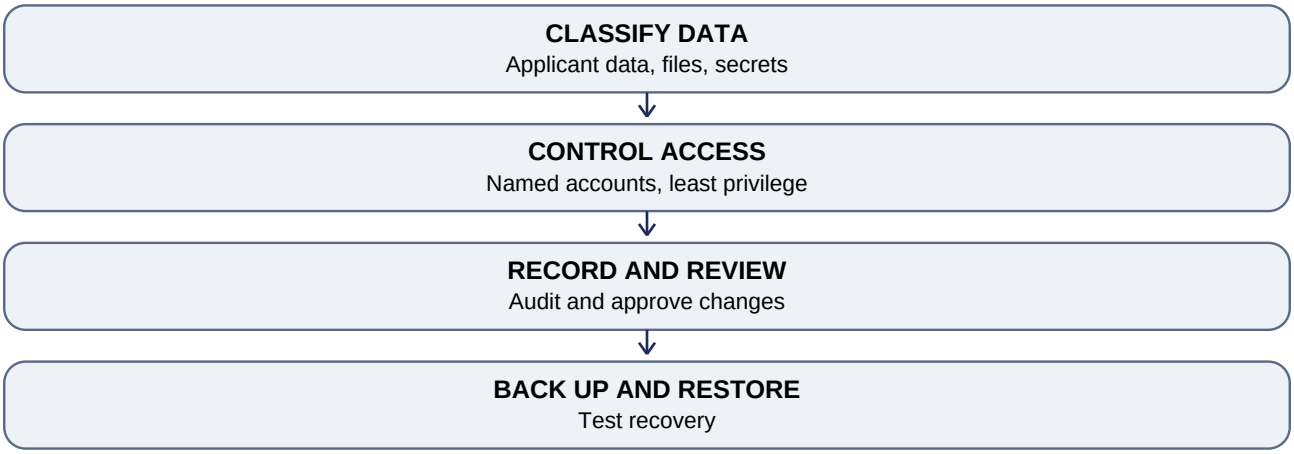
Process diagram



Generated explanatory diagram. It is not a screenshot of an executed workflow.

Result

Expected result and verification criteria. Controls have owners and evidence; restore and revocation work; residual risks are recorded, not claimed as resolved.
